Assignment of company code

Overview of Controlling Areas

	COAr	Name
☐	BBK	BBK - Egypt
☐	0001	RS Control Area

I clicked the **"New Entries"** button from the "Overview of Controlling Areas" screen.

New Entries: Details of Added Entries

Controlling Area: Tec1 COArea = CCode
 Name: Tec1 Controlling Area
 Person Responsible: LEARN-358

Assignment Control
 CoCd->CO Area: Cross-company-code cost accounting

Currency Setting
 Currency Type: 10
 Currency: EGP
 Curr/Val. Prof.:
☐ Diff. CCode Currency
☐ Active

Other Settings
 Chart of Accts: TEC
 Fiscal Year Variant: TC
 CCtr Std. Hierarchy: tec
 Leading FS Version:
☒ Hide Controlling Area in F4

Reconciliation Ledger

Save Cancel

Description: In this screen, I am configuring the master settings for the Controlling Area to integrate Management Accounting with Financial Accounting.

Key Actions Taken:

- **Controlling Area (COAr):** I used **TEC1** and selected the option "**COArea = CCode**". This ensures that the controlling area settings match my company code for consistency.
- **Assignment Control:** I selected "**Cross-company-code cost accounting**". This allows the controlling area to manage costs for multiple company codes if needed in the future.
- **Currency Setting:** I set the Currency Type to **10** (Company Code Currency) and the currency to **EGP**.
- **Other Settings:**
 - Linked the **Chart of Accounts (TEC)**.
 - Assigned the **Fiscal Year Variant (TC)**.
 - Defined the **Cost Center Standard Hierarchy (tec)**, which is mandatory for organizing cost centers.

The screenshot shows a software interface with a sidebar on the left containing 'nts/control' and 'npany code'. The main area has a 'Controlling Area' field with 'TEC1' and a 'COArea = CCode' button. Below it is a 'Name' field with 'Tec1 Controlling Area' and a 'Person Responsible' field with 'LEARN-358'. A 'Assignment Control' section is partially visible. A modal dialog titled 'Check standard hierarchy' is open, displaying the message: 'Standard hierarchy TEC does not exist. Should system TEC be created as a standard hierarchy?'. The dialog has 'Yes', 'No', and 'Cancel' buttons. In the background, there are checkboxes for 'Diff. CCode Currency' and 'Active', and a 'CCtr Std. hierarchy' field with 'TEC'.

Description: When I entered the name for the **Standard Hierarchy** in the previous step, the system checked its database and found that it hadn't been created yet. This pop-up is asking for permission to create it automatically.

Key Action:

- I clicked **"Yes"** to the message: *"Should system tec be created as a standard hierarchy?"*

Purpose: A **Standard Hierarchy** is a tree structure that organizes all Cost Centers in the company. Since this is a new setup for Company Code **TEC1**, the system must create this "folder" or "root node" first. By clicking "Yes," I am establishing the foundation for all future Cost Center accounting.

Description: After successfully creating the Controlling Area **TEC1**, the next essential step is to decide which management accounting features will be active.

Key Action:

- I selected my Controlling Area TEC1 from the list.

- I am now navigating to the sub-folder on the left titled "**Activate components/control indicators**".

Purpose: Creating the area is not enough; I must explicitly "turn on" the specific modules I need, such as **Cost Centers**, **Order Management**, or **Profit Center Accounting**. This allows the system to start collecting data for those specific functions within the **TEC1** area.

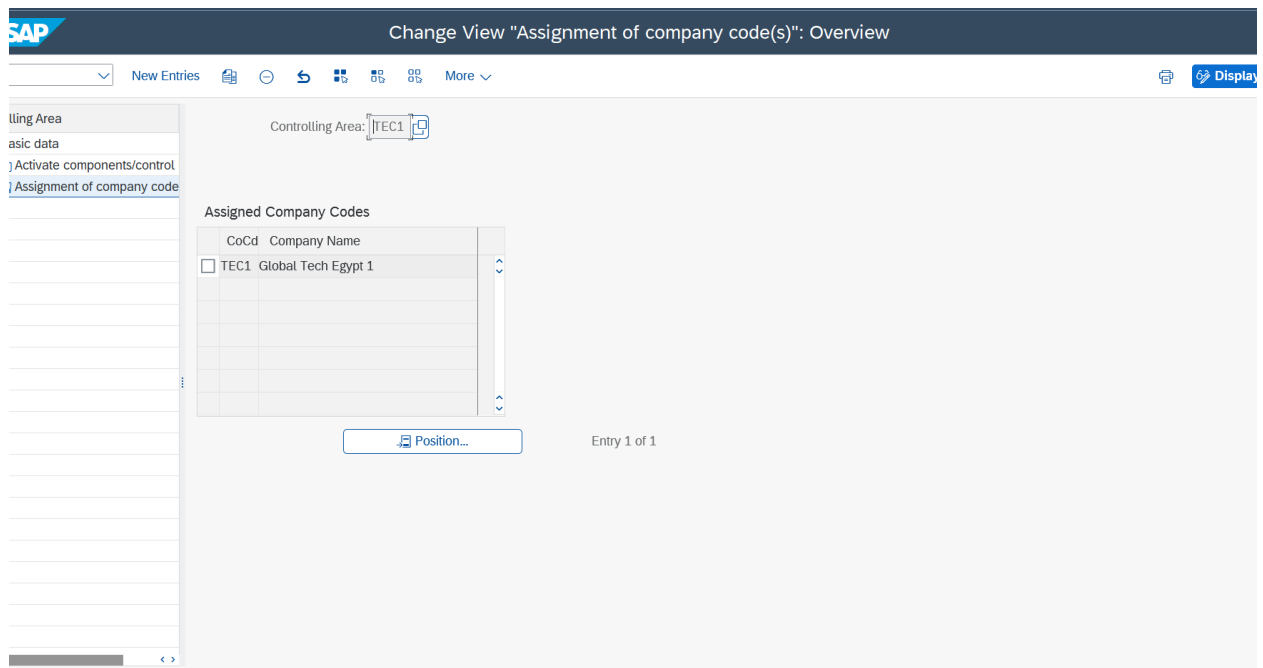

The screenshot displays the SAP S/4HANA interface for configuring a new Controlling Area. The top header shows the SAP logo and the title "New Entries: Details of Added Entries". The left sidebar contains a navigation tree with the following items: "Controlling Area", "Basic data", "Activate components/control" (selected), and "Assignment of company code". The main content area is titled "Activate Components" and shows the following settings:

- Controlling Area: **TEC1** (Tec1 Controlling Area)
- Fiscal Year: **2026** to: **9999**
- Cost Centers: **Component active**
- AA: Activity Type: ☐
- Order Management: **Component not active**
- Commit. Management: **Component not active**
- Acty-Based Costing: **Component Not Active**
- ProfitAnalysis: ☐ costing-based ☐ Margin Analysis
- Projects: ☐
- Sales Orders: ☐
- Cost Objects: ☐
- Real Estate Mgmt: ☐
- W. Commit. Mgt: ☐
- Other Indicators:
 - ☒ All Currencies
 - ☐ Variances
 - ☒ CoCrd Validation

In this screen, I am defining which management accounting components will be operational for the fiscal year **2026** onwards for Controlling Area **TEC1**.

Key Actions Taken:

- **Cost Centers:** I set the status to "**Component active**". This is a critical setting that allows the company to track and allocate costs to different departments.
- **Fiscal Year:** I specified the activation to start from the current year (**2026**) to the maximum limit (**9999**).
- **Other Indicators:** I checked the "**All Currencies**" box, which allows the controlling area to perform transactions and reporting in multiple currencies (not just the local currency).

Key Actions Taken:

- Purpose:** In SAP, data cannot flow from Financial Accounting (FI) to Controlling (CO) unless this assignment is made. This step ensures that every financial transaction posted in Company Code **TEC1** can be tracked and analyzed within the **TEC1** Controlling Area for internal reporting and cost management.

SAP Menu

Connector for Multi-Bank Connectivity

The screenshot shows the 'Create Cost Center: Initial Screen' in SAP. At the top, there is a navigation bar with the SAP logo and the title 'Create Cost Center: Initial Screen'. Below the navigation bar, there is a dropdown menu with a downward arrow, and the text 'Master Data' and 'More' with a downward arrow. The main area contains the following fields:

- Controlling Area:** A text field containing 'NA00' with a small icon to its right.
- Cost Center:** A text field with an asterisk (*) next to it.
- Valid From:** A text field with an asterisk (*) next to it.
- to:** A text field containing '12/31/9999'.

Below these fields, there is a section titled 'Reference' which contains two text fields:

- Cost Center:** A text field.
- Controlling Area:** A text field.

this step, I am navigating to the master data creation screen for Cost Centers.

Key Action:

- I entered the Transaction Code (T-Code) **/nOKKS** in the command field.
- This command is used to **Set the Controlling Area** before creating any master data.

Purpose: Before creating a Cost Center, the system must know which **Controlling Area** it belongs to.

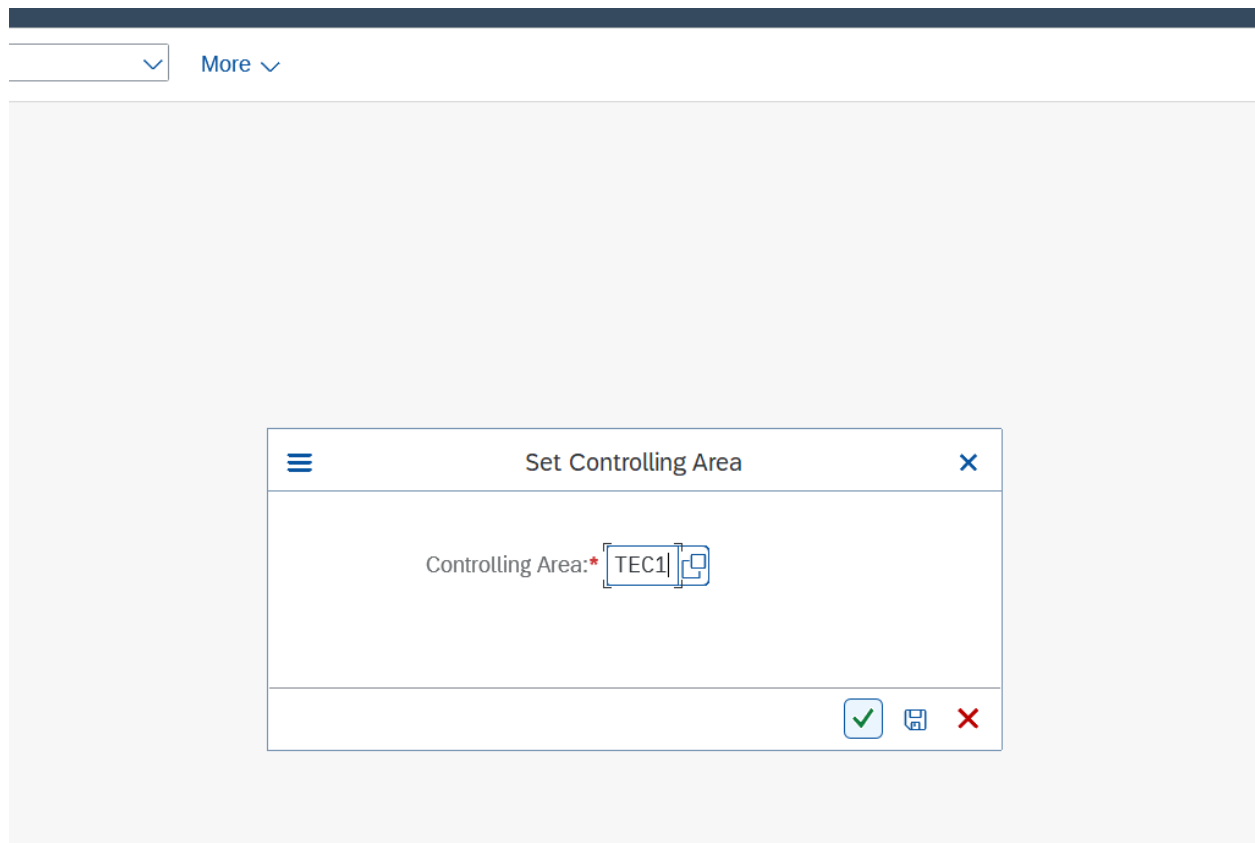

This ensures that all departments and costs are organized under the correct corporate structure

Cost Centers Master Data Creation

- Production Cost Center Setup:** These screens demonstrate the creation of the first cost center with the code **CT1**, assigned to the controlling area **TEC1**. The validity period

begins on **01/01/2026**. The center is categorized as a production type (Category **1**) with a standard hierarchy **TC** and local currency **EGP**.

- **Administrative Cost Center Setup:** The screens show the configuration of cost center **CT2**, classified under the administrative category (Category **W**) and hierarchy **TEC**. This setup ensures that general and administrative expenses are tracked and isolated effectively.
- **Data Saving Confirmation:** The system displays a final confirmation message verifying the successful creation and saving of the cost center master data in the database.
- **Sales and Distribution Cost Center Setup:** These steps illustrate the creation of cost center **CT3**, categorized under the sales category (Category **V**) and hierarchy **TEC**, to monitor all marketing and sales-related expenses for the company's products.
- **Organizational Hierarchy Review:** A final overview screen displays all created codes (**CT1, CT2, CT3**), showing their operational status and validity periods extending until the year **9999**.
